

## PRODUCT SHEET - BI & ANALYTICS CONCERTED PROJECT MANAGEMENT

### ***Do you experience that your BI & Analytics projects do not give the expected output?***

You may have experienced it is hard to meet the project expectations. Requirements might be too vague or too precise. Deadlines may be unrealistic and the understanding of why a BI and Analytics scope is ever-changing and the consequences is missing,

You may be in doubt if the requesters of the BI and Analytics product fully understand the nature of the journey, they are embarking together with you. You see a risk that they do not fully understand the shift in mindset needed at their side in order to enable the value creating the product is expected to provide. At the same time you are experienced enough to know, that eyes will be looking at you when the organisation starts questioning the return of the investment.

A broader more holistic take on project preparation and management is needed.

### ***Approxima's solution***

We will apply our organizational expertise, born out of hands-on experience to our holistic project management service.

Beyond the scope requirements, we will map the stakeholders, their expectations and in close collaboration sketch their future usage. For the benefit of both the deliver and the receiver of the product, we will help creating an unambiguous *Definition of Done* that will enable ending the product

By integrating elements from Organisational Change Managements, we will ensure a handover process that enables IT and all support functions to work with the reports from go-live day one. We will sketch a path towards self-sufficiency and self-service for the report users, as well as anchoring in a governance driving the further evolution of the solutions.

### ***Your Benefit and Business Value***

Our approach clarifies expectations, roles and responsibilities, empowers business users as well as IT's BI specialists, thereby contributing to a sustainable, agile and future-proof solution. We ensure that scalability and further development are taken as a given in the entire project.

### ***You should expect:***

BI&A-specific approach to scoping and project definition  
Optimized acceptance/adoption, RoI, sustainability and self-service enablement  
Roadmap for further development and lifecycle of the solution.
